**Subject:** ASPECT update 3 -- 19 March 2019 -- 0935  
**Date:** Tuesday, March 19, 2019 9:38:19 AM

---

ASPECT has completed 7 passes over the fire and reports that the level of smoke is more intense than yesterday. The system is not seeing much today in regards to compounds.

At present, the crew is tracking the extent of the plume in both altitude (floor and ceiling of the plume) and location out to about 20 miles.

Finally, sat comms today are not good. We are having hard time pulling data from the aircraft. We will work to resolve this issue.

We expect solid data in the next 30 minutes after they land.
